# CONTENTS

1	INTRODUCTION	1
2	STATIC PROPERTIES OF POLYMERS	8
2.1	The random flight model	8
2.1.1	The freely jointed model	8
2.1.2	General random flight models	9
2.1.3	Distribution of the end-to-end vector	11
2.2	The Gaussian chain	14
2.3	Chain conformation under an external field	17
2.3.1	The Green function	17
2.3.2	Example—chain confined in a box	19
2.4	Scattering function	21
2.5	Excluded volume effect	24
2.5.1	Introduction	24
2.5.2	Model of the excluded volume chain	25
2.5.3	Theoretical approaches	27
2.6	Scaling	32
	Appendix 2.I Gaussian distribution functions	35
	Appendix 2.II Differential equation for $G(R, R'; N)$	40
	Appendix 2.III Perturbation calculation for the excluded volume effect	41
	References	43
3	BROWNIAN MOTION	46
3.1	Introduction	46
3.2	The Smoluchowski equation	46
3.2.1	Diffusion of particles	46
3.2.2	Diffusion in phase space	50
3.2.3	Irreversibility of the Smoluchowski equation	51
3.3	The Langevin equation	52
3.4	Time correlation function and response function	55
3.4.1	Time correlation function	55
3.4.2	Microscopic expression for the time correlation function	56
3.4.3	Fluctuation dissipation theorem	58
3.5	Brownian motion in a harmonic potential	62
3.5.1	Smoluchowski equation	62
3.5.2	Langevin equation	63
3.6	Interacting Brownian particles	65

3.7	Microscopic basis of viscoelasticity	69
3.7.1	Introduction	69
3.7.2	Constitutive equation	70
3.7.3	The Smoluchowski equation for a system in macroscopic flow	71
3.7.4	Expression for the stress tensor	72
3.7.5	Principle of virtual work	75
3.8	Systems with rigid constraints	76
3.8.1	Introduction	76
3.8.2	The method of generalized coordinates	77
3.8.3	The method of Lagrangian multipliers	79
3.8.4	Elastic stress and viscous stress	80
3.8.5	Variational formulation	82
Appendix 3.I	Eigenfunctions of the Smoluchowski equation	83
Appendix 3.II	Relationship between the Langevin equation and the Smoluchowski equation	85
Appendix 3.III	The Oseen tensor	88
References		89
4	DYNAMICS OF FLEXIBLE POLYMERS IN DILUTE SOLUTION	91
4.1	The Rouse model	91
4.1.1	Dynamics of a polymer with localized interaction	91
4.1.2	Normal coordinates	94
4.2	The Zimm model	97
4.2.1	Zimm model in $\Theta$ conditions	97
4.2.2	Zimm model in good solvent	100
4.3	Dynamical scaling	103
4.4	Dynamic light scattering	105
4.5	Viscoelasticity	108
4.5.1	Introduction	108
4.5.2	Microscopic expression for the stress tensor	110
4.5.3	Calculation of the intrinsic viscosity	112
4.5.4	Intrinsic moduli	114
4.6	Variational bounds for the transport coefficients	116
4.6.1	Introduction	116
4.6.2	Bounds for the intrinsic viscosity	116
4.6.3	Bounds for the diffusion constant	119
4.7	Birefringence	121
4.7.1	Birefringence of polymer solutions	121
4.7.2	Molecular expression for birefringence	122
4.7.3	Flow birefringence	127

Appendix 4.I	The Verdier–Stockmayer model	129
Appendix 4.II	Derivation of the normal modes	131
Appendix 4.III	Dynamic structure factor	132
Appendix 4.IV	Polarizability tensor of a Gaussian chain	135
References		137
<b>5</b>	<b>MANY CHAIN SYSTEMS</b>	<b>140</b>
5.1	Semidilute and concentrated solutions	140
5.2	Gaussian approximation for concentration fluctuations	143
5.2.1	Collective coordinates	143
5.2.2	Pair correlation function	147
5.2.3	Osmotic pressure	148
5.2.4	Size of a single chain	149
5.3	Scaling theory—statics	152
5.4	Topological interaction in polymer dynamics	156
5.4.1	Entanglement effect	156
5.4.2	Rigorous approach	158
5.4.3	The tube model	160
5.5	Dynamics of concentration fluctuations	161
5.5.1	Kinetic equation	161
5.5.2	Dynamic light scattering	164
5.5.3	Form birefringence	166
5.6	Scaling theory—dynamics	169
5.7	Effective medium theory	172
5.7.1	Failure of the scalar field description	172
5.7.2	Hydrodynamic screening	173
5.7.3	Effective medium theory	174
5.7.4	Example	176
Appendix 5.I	Transformation to collective coordinates	180
Appendix 5.II	Osmotic pressure in concentrated solution	182
Appendix 5.III	Perturbation calculation of $\langle R^2 \rangle$	183
References		184
<b>6</b>	<b>DYNAMICS OF A POLYMER IN A FIXED NETWORK</b>	<b>188</b>
6.1	Tube model	188
6.1.1	Tube model in crosslinked systems	188
6.1.2	Tube model in uncrosslinked systems	189
6.2	Reptation	191

6.2.1	Primitive chain	191
6.2.2	Simple application	193
6.3	Reptation dynamics	197
6.3.1	Stochastic equation for reptation dynamics	197
6.3.2	Segmental motion	198
6.3.3	Correlation function of the tangent vectors	201
6.3.4	Dynamic structure factor	202
6.3.5	General time correlation function	204
6.4	Contour length fluctuation	205
6.4.1	Statistical distribution of the contour length	205
6.4.2	Dynamics of the contour length fluctuation	206
6.4.3	Effect of the contour length fluctuation on reptation	210
6.4.4	Other small-scale fluctuations and their effects on the segmental motion	211
6.4.5	Branched polymers	213
Appendix 6.I	Entropy of a polymer in a tube	215
References		216
7	MOLECULAR THEORY FOR THE VISCOELASTICITY OF POLYMERIC LIQUIDS	218
7.1	Tube model in concentrated solutions and melts	218
7.2	Microscopic expression for the stress tensor	220
7.2.1	Stress in polymeric liquids	220
7.2.2	Stress optical law	221
7.3	Linear viscoelasticity	222
7.3.1	Background of phenomenological theory	222
7.3.2	Calculation by Rouse model	225
7.3.3	Calculation by reptation model	226
7.3.4	Comparison with experiments	228
7.3.5	Tube diameter in melts	230
7.3.6	Semidilute and concentrated solutions	234
7.4	Other relaxation modes	236
7.4.1	Discrepancy between the theory and experiments	236
7.4.2	Contour length fluctuation and tube reorganization	238
7.5	Stress relaxation after large step strain	239
7.5.1	Experimental setup	239
7.5.2	Calculation by Rouse model	241
7.5.3	Calculation by reptation model	243
7.5.4	Comparison with experimental results	249
7.5.5	Discussion	254
7.6	Nonlinear viscoelasticity	255
7.6.1	Phenomena of nonlinear viscoelasticity	255
7.6.2	Deformation gradient tensor	258
7.6.3	Constitutive equation derived from Rouse model	259
7.7	Approximate constitutive equation for reptation model	260

7.7.1	Deformation of the primitive chain	261
7.7.2	Independent alignment approximation	262
7.7.3	Constitutive equation	264
7.7.4	Comparison with experiments	266
7.7.5	Discussion	268
7.8	Stress relaxation after double step strain	270
7.9	Rigorous constitutive equation for reptation model	274
7.10	Further applications	278
7.10.1	Branched polymers	278
7.10.2	Molecular weight distribution	281
7.10.3	Future problems	282
References		283
8	DILUTE SOLUTIONS OF RIGID RODLIKE POLYMERS	289
8.1	Rodlike polymers	289
8.2	Rotational diffusion	290
8.2.1	Rotational Brownian motion	290
8.2.2	Hydrodynamics of rotational motion	291
8.2.3	Smoluchowski equation for rotational motion	294
8.3	Translational diffusion	295
8.3.1	Hydrodynamics of translational motion	295
8.3.2	Smoluchowski equation including both translational and rotational diffusion	296
8.4	Brownian motion in the equilibrium state	298
8.4.1	Vector correlation function $\langle \mathbf{u}(t) \cdot \mathbf{u}(0) \rangle$	298
8.4.2	Translational diffusion	299
8.4.3	Dynamic light scattering	300
8.5	Orientation by an electric field	303
8.5.1	The effect of an electric field	303
8.5.2	Dielectric relaxation	304
8.5.3	Electric birefringence	306
8.6	Linear viscoelasticity	307
8.6.1	Expression for the stress tensor	307
8.6.2	Calculation for weak velocity gradient	310
8.7	Nonlinear viscoelasticity	312
8.7.1	Decoupling approximation	312
8.7.2	Elongational flow	313
8.7.3	Shear flow	314
8.8	Effect of flexibility	316
Appendix 8.I	Derivation of the Smoluchowski equation by the Kirkwood theory	318

<b>9 SEMIDILUTE SOLUTIONS OF RIGID RODLIKE POLYMERS</b>	<b>324</b>
9.1 Semidilute and concentrated solutions of rodlike polymers	324
9.2 Entanglement effect in rodlike polymers	326
9.2.1 Tube model	326
9.2.2 Translational diffusion	327
9.2.3 Rotational diffusion	327
9.2.4 Estimation of the tube radius and the rotational diffusion constant	328
9.3 Brownian motion in equilibrium	330
9.3.1 Time correlation functions	330
9.3.2 Dynamic light scattering	332
9.4 Orientation by external fields	333
9.4.1 Linear regime	333
9.4.2 Nonlinear regime—tube dilation	334
9.4.3 Experimental study of the rotational diffusion constant	335
9.5 Viscoelasticity	336
9.5.1 Expression for the stress tensor	336
9.5.2 Linear viscoelasticity	337
9.5.3 Nonlinear viscoelasticity	339
9.6 Short time-scale motion	340
9.6.1 Chopstick model	340
9.6.2 Local equilibrium approximation	342
9.6.3 Example	343
Appendix 9.I Tube dilation by orientational ordering	345
Appendix 9.II Effective potential for the tube	346
References	348
<b>10 CONCENTRATED SOLUTIONS OF RIGID RODLIKE POLYMERS</b>	<b>350</b>
10.1 Introduction	350
10.2 The phase transition of rigid rods	351
10.2.1 Free energy for a given orientational distribution function	351
10.2.2 Equilibrium distribution	354
10.3 The kinetic equation	358
10.3.1 Dynamical mean field theory	358
10.3.2 Relaxation of the order parameter	360
10.4 Pretransitional phenomena	362
10.4.1 Introduction	362
10.4.2 Magnetic birefringence	363

## CONTENTS

xiii

10.4.3 Viscoelasticity	365
10.5 Linear viscosity in the nematic phase	366
10.5.1 Introduction	366
10.5.2 Perturbation scheme	369
10.5.3 Approximate calculation	370
10.5.4 Example—shear flow	372
10.5.5 The Leslie coefficients	374
10.6 Future problems	376
10.6.1 Nonlinear viscoelasticity in nematics	376
10.6.2 Spatial inhomogeneity and domain structure	376
10.6.3 Thermotropic liquid crystals	378
